Kynd — Seed Brief

Problem: founders pay $8k per usability study and wait three weeks for a report.

Solution: synthetic personas run an artifact in minutes and return a structured report.

Traction: 41 paying teams, $23k MRR, 18% month-over-month growth.

Pricing: $99 per run, $499 per month for agencies. No free tier.

Ask: $1.5M seed to hire two engineers and double the persona library.

Why now

AI-generated audiences are good enough for directional feedback on copy and positioning.

Teams already ship weekly; research is the slowest step in the loop.

Our differentiation is the persona evidence model, not the chat interface.
